1. Comment. Spare part shipments from the USSR which, compared with previous months, dropped about 50 percent.

2. Comment. The total volume of incoming shipments was that of the preceding months. While the volume of incoming shipments from the USSR has decreased since August 1953, the supply of spare parts from the East German production has increased. The ratio of supplies from the USSR and the Soviet Zone was 2 : 3 in September. The volume of return shipments of obsolete material from tank repair shops fluctuates between 100 and 110 carloads per month.

25X1

3. Comment. The rate of outgoing shipments considerably increased, during the period of observation, probably because of intensified repair work at the tank repair shops after the summer training.
